

# Information Systems(IS) and Computer based IS

Tags: System, Information system, Hardware, Software, Database, Telecommunications

## Information System (IS)

**Information system** - a set of interrelated component (kind of like in Systems) that collect, process, store and *disseminate*(spread) data and information; and provides a feedback mechanism to monitor and control its operation to make sure it continues to meet its goals and objectives.

---

## Computer-Based Information System

A single set of:

- **Hardware**
- **Software**
- **Databases**
- **Telecommunications**
- **People**
- **Procedures**

-Configured to collect, manipulate, store and process data into information
